## Abstracts

According to our (Global Info Research) latest study, the global Network Switches market size was valued at US\$ 34600 million in 2025 and is forecast to a readjusted size of US\$ 47210 million by 2032 with a CAGR of 4.6% during review period.

A network switch (also called switching hub, bridging hub, officially MAC bridge) is networking hardware that connects devices on a computer network by using packet switching to receive and forward data to the destination device.

Growth in the network switch market is primarily driven by the ongoing expansion of digital infrastructure and rising performance requirements. Rapid development of cloud computing, big data, artificial intelligence, and online services significantly increases demand in data centers and enterprise networks for higher bandwidth, lower latency, and greater reliability, accelerating the transition toward higher port speeds such as 25G, 100G, and 400G. At the same time, enterprise digital transformation, remote working, and industry informatization projects fuel upgrades of campus and access networks, supporting demand for switches with enhanced forwarding capacity, intelligent management, and security features. Investments by telecom operators in 5G, fiber-based networks, and edge computing further expand opportunities in metro and transport networks. In parallel, the shift toward network virtualization, software-defined networking (SDN), and automated operations drives switches to evolve from pure hardware products into integrated hardware?software platforms, sustaining replacement and upgrade cycles.

The key players of network switches include Cisco, Huawei, etc. The top 3 players of Network Switches account for approximately 48% of the total market. North America is

the largest market of Network Switches accounting for about 37%, followed by Europe and Asia-Pacific.
