Abstracts

A biomarker, or biological marker is a measurable indicator of some biological state or condition. Biomarkers are often measured and evaluated to examine normal biological processes, pathogenic processes, or pharmacologic responses to a therapeutic intervention. Biomarkers are used in many scientific fields. Neurology disorders are affecting major percentage of the global population and it is considered a major cause of disability around the globe. The prevalence of neurological disorders is growing at a very high pace, in which biomarkers are expected play a vital role in better understanding of the disease and development of personalized medicine specific to the patient.

Scope of the Report:

This report studies the Neurological Biomarkers market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Neurological Biomarkers market by product type and applications/end industries.

North American was the leading market in 2017, and is expected to continue this trend throughout the forecast period. This is attributed to rise in expenditure on the management of Parkinson's disease in the country. As of 2017, North American had a population of 326,506,644 individuals, and about 60,000 individuals are diagnosed with Parkinson's diseases every year. Thus, significant prevalence of this disease among the North American population drives the growth of the market. However, China is projected to emerge as a lucrative market in future, due to the higher prevalence of Parkinson's disease observed in males in 2017.

The global Neurological Biomarkers market is valued at xx million USD in 2017 and is

expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
