Abstracts

According to our (Global Info Research) latest study, the global Neurotransmitter Inhibitor Peptides market size was valued at US$ 97 million in 2025 and is forecast to a readjusted size of US$ 142 million by 2032 with a CAGR of 5.7% during review period.

Neurotransmitter Inhibitor Peptides are bioactive cosmetic peptides designed to reduce the release or activity of neurotransmitters involved in facial muscle contraction, especially acetylcholine-related signaling. In skincare, they are mainly used as topical anti-aging ingredients to soften expression lines and dynamic wrinkles by modulating SNARE-complex formation, SNAP-25-related signaling, or neuromuscular communication; typical examples include acetyl hexapeptide-8 and acetyl octapeptide-3.

In 2025, global Neurotransmitter Inhibitor Peptides production reached approximately 13,824 kg, with an average global market price of around US$ 6,800 per kg. The production capacity of Neurotransmitter Inhibitor Peptides is approximately 17 tons per year, the average gross profit margin was 31-33%.

The upstream supply chain mainly includes amino acids, protected amino-acid derivatives, peptide synthesis reagents, solvents, purification media, stabilizers, and packaging materials. Midstream manufacturers conduct solid-phase peptide synthesis, purification, freeze-drying, formulation stabilization, and quality testing. Downstream demand comes from anti-aging skincare brands, functional cosmetics, cosmeceutical formulators, beauty clinics, OEM/ODM cosmetics manufacturers, and distributors of active cosmetic ingredients.

The cost structure is mainly composed of peptide synthesis raw materials, coupling reagents, solvents, purification and separation costs, quality-control testing, freeze-drying, formulation stabilization, labor, energy, packaging, regulatory compliance, and R&D expenses. For high-purity or modified peptides, purification, yield loss, analytical testing, and synthesis complexity usually account for a large share of total cost.
