Abstracts

The global Neurotransmitter Inhibitor Peptides market size is expected to reach $ 142 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Neurotransmitter Inhibitor Peptides are bioactive cosmetic peptides designed to reduce the release or activity of neurotransmitters involved in facial muscle contraction, especially acetylcholine-related signaling. In skincare, they are mainly used as topical anti-aging ingredients to soften expression lines and dynamic wrinkles by modulating SNARE-complex formation, SNAP-25-related signaling, or neuromuscular communication; typical examples include acetyl hexapeptide-8 and acetyl octapeptide-3.

In 2025, global Neurotransmitter Inhibitor Peptides production reached approximately 13,824 kg, with an average global market price of around US$ 6,800 per kg. The production capacity of Neurotransmitter Inhibitor Peptides is approximately 17 tons per year, the average gross profit margin was 31-33%.

The upstream supply chain mainly includes amino acids, protected amino-acid derivatives, peptide synthesis reagents, solvents, purification media, stabilizers, and packaging materials. Midstream manufacturers conduct solid-phase peptide synthesis, purification, freeze-drying, formulation stabilization, and quality testing. Downstream demand comes from anti-aging skincare brands, functional cosmetics, cosmeceutical formulators, beauty clinics, OEM/ODM cosmetics manufacturers, and distributors of active cosmetic ingredients.

The cost structure is mainly composed of peptide synthesis raw materials, coupling

reagents, solvents, purification and separation costs, quality-control testing, freeze-drying, formulation stabilization, labor, energy, packaging, regulatory compliance, and R&D expenses. For high-purity or modified peptides, purification, yield loss, analytical testing, and synthesis complexity usually account for a large share of total cost.
