## Abstracts

The global Neutral Calcium Sulfonate market size is expected to reach \$ 533 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032). Neutral calcium sulfonate is a petroleum sulfonate derivative, primarily used as a lubricant additive. It exhibits excellent cleaning, dispersing, rust-inhibiting, and neutralizing properties, effectively removing engine carbon deposits, neutralizing acidic substances produced during combustion, and protecting the engine from corrosion. It is commonly used in engine oils and high-performance greases.

The main upstream raw materials are heavy alkylbenzene sulfonic acid or petroleum sulfonic acid, and calcium hydroxide. Alkylbenzene, as a downstream product of petrochemicals, has a molecular weight distribution and long-chain alkyl structure stability that directly affect the oil solubility of calcium sulfonate.

In 2025, the global sales volume is projected to be approximately 98,000 tons, with an average market price of approximately US\$3,856 per ton. The industry's gross profit margin is approximately 10-25%.

This report studies the global Neutral Calcium Sulfonate production, demand, key manufacturers, and key regions.
