According to our (Global Info Research) latest study, the global Neutral Cellulase Enzyme market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Neutral Cellulase Enzyme is a new type of neutral liquid cellulase preparation, the main ingredient is endoglucanase, also known as neutral enzyme water. It can selectively concentrate and hydrolyze the messy tiny fibers on the surface of the fabric without damaging the fiber backbone. Therefore, after treatment, the strength of the fabric remains good, and the texture is clear to obtain a high-quality fabric surface. Under neutral conditions, it can be combined with dyeing, oxygen removal and other processes. It is suitable for fabrics containing cotton, hemp and other natural cellulose fibers and regenerated cellulose fibers.
