Abstracts

The global Neutral Cellulase Enzyme market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Neutral Cellulase Enzyme is a new type of neutral liquid cellulase preparation, the main ingredient is endoglucanase, also known as neutral enzyme water. It can selectively concentrate and hydrolyze the messy tiny fibers on the surface of the fabric without damaging the fiber backbone. Therefore, after treatment, the strength of the fabric remains good, and the texture is clear to obtain a high-quality fabric surface. Under neutral conditions, it can be combined with dyeing, oxygen removal and other processes. It is suitable for fabrics containing cotton, hemp and other natural cellulose fibers and regenerated cellulose fibers.

This report studies the global Neutral Cellulase Enzyme production, demand, key manufacturers, and key regions.
