Abstracts

According to our (Global Info Research) latest study, the global Neutral Organophosphorus Extractant market size was valued at US\$ 138 million in 2025 and is forecast to a readjusted size of US\$ 181 million by 2032 with a CAGR of 4.0% during review period.

Neutral organophosphorus extractants are compounds formed by the complete substitution of the hydroxyl groups in orthophosphoric acid molecules with hydrocarbon or alkoxy groups. They achieve extraction through the coordination and complexation of metal cations with the phosphoryl (P=O) oxygen atom within the molecule. These extractants are characterized by strong extraction capability, high selectivity, and ease of stripping.

Upstream raw materials primarily include phosphorus-based chemical feedstocks such as phosphorus trichloride, phosphorus oxychloride, and phosphorus pentoxide, as well as fatty alcohols like n-butanol, isobutanol, octanol, and 2-ethylhexanol; the production of certain phosphine oxides also requires olefins, alkyl halides, Grignard reagents, phosphine or phosphonite intermediates, and oxidizing agents such as hydrogen peroxide. Midstream enterprises employ processes including esterification, alkylation, oxidation, rectification/purification, and formulation to control parameters such as acid value, moisture content, phosphorus content, metal impurities, viscosity, and phase separation performance. Downstream applications primarily span nuclear fuel processing, rare earth elements, uranium, copper, cobalt, nickel, zirconium-hafnium, the phosphorus chemical industry, and the treatment of spent batteries and industrial waste liquids.

In 2025, global sales volume is projected to be approximately 28,000 metric tons at an average price of around US\$4,800 per ton, with major industry players achieving gross profit margins of approximately 22%-38%.
