According to our (Global Info Research) latest study, the global Neutron Activation Analysis Instrument market size was valued at US\$ 226 million in 2024 and is forecast to a readjusted size of USD 291 million by 2031 with a CAGR of 3.2% during review period.

Neutron Activation Analysis Instrument is an instrument that uses neutron activation analysis technology to perform elemental analysis. Neutron activation analysis is to bombard the isotopes of elements in the sample with neutrons of a certain energy and flux. After the nuclear reaction occurs, the energy and intensity of the rays (mainly gamma rays) generated by the prompt gamma or radioactive nuclide decay are measured to perform qualitative and quantitative analysis of the elements in the material. Its core components include neutron source, detector, signal processing system, etc., which have the advantages of high sensitivity, high accuracy, non-destructiveness, no reagent blank contamination and simultaneous analysis of multiple elements.

This report is a detailed and comprehensive analysis for global Neutron Activation Analysis Instrument market.
