According to our (Global Info Research) latest study, the global Neutron Low Scattering Irradiator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Neutron Low Scattering Radiometer (NLSI) is a device used for neutron scattering experiments to generate low energy neutron beams with clear energy and intensity. It consists of a neutron source, a collimator and a sample holder. The neutron source usually uses radioisotopes, such as americium beryllium (AmBe), to generate neutrons through the spontaneous fission process. The collimator is used to shape and guide the neutron beam, while the sample holder is used to fix the sample under study.
