The global Neutron Low Scattering Irradiator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Neutron Low Scattering Radiometer (NLSI) is a device used for neutron scattering experiments to generate low energy neutron beams with clear energy and intensity. It consists of a neutron source, a collimator and a sample holder. The neutron source usually uses radioisotopes, such as americium beryllium (AmBe), to generate neutrons through the spontaneous fission process. The collimator is used to shape and guide the neutron beam, while the sample holder is used to fix the sample under study.
