According to our (Global Info Research) latest study, the global Neutron Radiation Protective Suit market size was valued at US\$ 192 million in 2024 and is forecast to a readjusted size of USD 226 million by 2031 with a CAGR of 2.2% during review period.

Neutron radiation protective suit is composed of fabric and composite neutron radiation shielding material (referred to as shielding material). It is a kind of clothing specially designed for neutron radiation protection. Neutron protective clothing material has good flexibility and is comfortable to wear. Its main function is to reduce or eliminate the harm of neutron radiation to the human body. The shielding rate of thermal neutrons can reach 88.5% for a single layer, and up to 99% for multiple layers.
