Abstracts

According to our (Global Info Research) latest study, the global NEV Charging Software market size was valued at US$ 18440 million in 2025 and is forecast to a readjusted size of US$ 185680 million by 2032 with a CAGR of 39.5% during review period.

NEV (New Energy Vehicle) charging software refers to the software systems and platforms that facilitate the charging of electric vehicles (EVs) or plug-in hybrid electric vehicles (PHEVs). These software solutions are designed to manage and optimize the charging process, providing a seamless and efficient experience for both EV owners and charging station operators.

The development of electric vehicle charging stations for electric vehicles has gained significant momentum over the past decade. Adoption of charging station services for electric vehicles help in reducing the pollution in large population centers, increase customer loyalty, and attract new customers, thereby driving the market growth. The rapidly evolving electric vehicle (EV) market is driving innovation in EV technology and associated infrastructure. Electric vehicles offer multiple advantages such as reduced fuel consumption and decreased emissions from tailpipes, which significantly boost their demand across the globe. This in turn is expected to escalate the need for charging stations for electric vehicles, thereby driving the market growth. Charging stations are being rapidly developed as a part of government initiative programs and EV manufacturers are being involved in the development of charging spots in the parking locations. EV manufacturers are focusing on the establishment of charging stations for electric cars to enhance the sales of electric vehicles. EV Charging as a service at the workplace can be a crucial opportunity for EV drivers who do not have easy access to home charging stations. Workplaces are most likely to install fast chargers. Moreover, a
