Abstracts

The new energy oil-cooled motor is to improve the heat dissipation capacity of the motor, and the oil itself has no effect on the magnetic circuit of the motor because of the local non-magnetic, non-flammable, non-conductive and good heat conduction characteristics. Compared with water cooling, the advantages are good insulation performance, higher boiling point of oil than water, and lower freezing point than water, so that the coolant is not easy to freeze at low temperatures and not easy to boil at high temperatures.

According to our (Global Info Research) latest study, the global New Energy Oil-cooled Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
