The global New Energy Thermal Management System Pipeline Assembly market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

As the world pays more and more attention to environmental protection and sustainable development, the new energy vehicle market continues to expand, and the demand for new energy thermal management systems continues to grow. In 2022, the total global sales of new energy vehicles will exceed 10 million, a simultaneous increase of 61%. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China will reach 7.058 million and 6.887 million respectively, a year-on-year increase of 96.9% and 93.4%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million. The application of technological innovation, new materials and intelligent control technology will improve the efficiency and reliability of the thermal management system. Advances in battery and fuel cell technology will further increase the demands placed on thermal management systems to ensure batteries are in optimal working condition and improve battery performance and lifespan. In some emerging markets, such as China and India, the government has strong policy support for new energy vehicles, and new energy thermal management systems will face greater market opportunities.

The new energy thermal management system pipeline assembly is a key component in new energy vehicles, used to control the temperature of the battery or fuel cell to ensure

its operation within a suitable working range. It is composed of heat conduction pipelines, coolant pipelines, heat recovery pipelines and other components. It absorbs or dissipates heat energy through circulating coolant or heat medium, and transfers the heat to the radiator or recycles it. The main function of the new energy thermal management system is to improve the charging and discharging efficiency of the battery, prolong the battery life, and ensure the efficient operation of the fuel cell. It is very important for the safety and stability of new energy vehicles.
