According to our (Global Info Research) latest study, the global New Energy Vehicle Heating Element market size was valued at US\$ 95.18 million in 2025 and is forecast to a readjusted size of US\$ 406 million by 2032 with a CAGR of 22.7% during review period.

New Energy Vehicle Heating Element is a low-profile heater built by printing conductive, resistive, and dielectric insulation layers directly onto a metal substrate such as aluminum or stainless steel, followed by curing or firing to create an integrated heating circuit. Its core advantages are direct bonding to the substrate, fast thermal response, uniform surface heating, low profile, vibration resistance, and automotive-grade reliability, making it suitable for EV battery preheating, ADAS de-fog/de-ice, floor heating, and cabin comfort applications.

On the supply side, the key upstream inputs are metal substrates such as aluminum and stainless steel, together with silver or silver-palladium conductor pastes, resistive heater pastes, dielectric insulation pastes, glass frits/ceramic fillers, resins, and solvents. Downstream demand is concentrated in traction-battery preheating, ADAS heater modules, floor heaters, cabin comfort heaters, and selected smart-surface uses.

In 2025, global new energy vehicle heating element production reached approximately 9 million units, with an average global market price is \$10 per unit.
