New Energy Vehicle Main Control Board Function Test Equipment is professional testing equipment dedicated to the research and development as well as mass production of various vehicle-mounted main control circuit boards for new energy vehicles. It is mainly applied to core main boards such as VCU, BMS, MCU, BCM and vehicle domain controllers. Integrating electrical performance detection, signal communication verification, functional logic inspection, program burning, parameter calibration, safety voltage resistance test and aging monitoring, it can simulate the high and low voltage operating conditions and vehicle communication environment of complete vehicles to accurately detect circuit faults, component abnormalities and performance defects. Divided into manual jigs, semi-automatic models and fully automatic on-line production line systems, it is widely used in the research and development debugging, production quality inspection and factory final inspection of automotive electronics, serving as an essential key device to ensure the safety, stability and mass production yield of new energy vehicle electronic control main boards. The price range of this device is generally between 100000 and 500000 yuan per unit.
