Abstracts

The global New Energy Vehicle Motor Stator Production Line market size is expected to reach \$ 4122 million by 2032, rising at a market growth of 9.9% CAGR during the forecast period (2026-2032).

A new energy vehicle motor stator production line is a complete equipment system specifically designed for the automated manufacturing of drive motor stators for new energy vehicles. It typically integrates processes such as lamination stacking, insulation treatment, flat or round wire winding, wire forming, welding, impregnation and curing, and online testing. It enables high-precision, high-consistency mass production to meet the efficiency and reliability requirements of electric drive systems. In 2025, global sales were estimated at approximately 8,200 units, with an average unit price of approximately US\$265,000, a capacity utilization rate of approximately 85%, and a gross profit margin of approximately 31%. Its upstream mainly includes industrial robot and motion control system manufacturers, CNC machining equipment companies, special mold and tooling fixture suppliers, and electrical component and sensor companies. The midstream consists of motor manufacturing equipment and automated production line integrators. The downstream mainly comprises new energy vehicle OEMs, electric drive system suppliers, and specialized motor manufacturers. The product cost structure is heavily reliant on mechanical structures and processing equipment. The breakdown by sector is approximately 42%, electrical control and software systems 28%, robotics and automation units 15%, assembly, debugging and manual labor 8%, and other management and after-sales services 7%. On the demand side, the downstream demand list includes expansion of new energy vehicle drive motor production, upgrades to flat wire motor production lines, development of high-efficiency electric drive systems, intelligent manufacturing transformation, and capacity replacement upgrades. The downstream customer list includes new energy vehicle

manufacturers, electric drive system companies, independent motor manufacturers, and automotive parts groups. On the business opportunity side, policy-driven growth stems from support for the new energy vehicle industry and carbon neutrality goals, driving continuous growth in demand for electric drive systems. Technological innovation drives demand for equipment upgrades due to advancements in flat wire motor technology, high-speed and high-efficiency motor design, and intelligent production line control systems. Changing consumer demands are reflected in increased user requirements for improved range, energy efficiency, and overall vehicle performance, thus driving stator production lines towards higher automation, precision, and flexibility.

The new energy vehicle motor stator production line is in a stage of rapid expansion and technological iteration, and its growth is mainly driven by the continuous increase in the penetration rate of new energy vehicles and the upgrading of electric drive systems towards high efficiency and high power density. In particular, flat wire motors have gradually become the mainstream technology route, which puts higher requirements on stator manufacturing processes, thus promoting the integrated development of high-precision winding, automatic welding, and online detection in the production line. At the same time, vehicle manufacturers have enhanced their supply chain control capabilities, driving some host factories to build or deeply participate in the layout of motor production lines, further expanding equipment demand. In terms of competition, the industry is shifting from single machine equipment competition to competition for whole line solutions and system integration capabilities. Manufacturers with whole line delivery capabilities and software control advantages have more market advantages. The sentence is:, In addition, under the background of intelligent manufacturing and industrial digitization, production lines are accelerating their upgrading towards digital management, data traceability, and remote operation and maintenance, improving production efficiency and product consistency. In the future, with the continuous growth of the global new energy vehicle market and the continuous evolution of motor technology, fixed production lines will maintain a high level of prosperity, while industry concentration is expected to increase. Technical barriers and customer certification barriers will also be further strengthened.
