New Energy Vehicle Suspension System is a type of suspension system designed specifically for electric and hybrid vehicles. It is an essential component of the vehicle's chassis that helps to absorb shocks and vibrations caused by uneven road surfaces. This system improves the vehicle's stability, handling, and overall ride quality, while also reducing energy consumption and maximizing the vehicle's range.

The upstream industry chain of the New Energy Vehicle Suspension System includes raw material suppliers, such as steel and aluminum manufacturers, as well as component manufacturers, such as shock absorber and spring manufacturers. The downstream industry chain includes automobile manufacturers who integrate the suspension system into their vehicles.

In terms of the distribution of the product's world market share by region, Asia-Pacific dominates the market due to the high demand for electric and hybrid vehicles in countries like China, Japan, and South Korea. Europe and North America also have significant market shares due to the increasing adoption of electric and hybrid vehicles in these regions.
