According to our (Global Info Research) latest study, the global New Energy Vehicles Battery Enclosure market size was valued at USD 5124.2 million in 2023 and is forecast to a readjusted size of USD 33920 million by 2030 with a CAGR of 31.0% during review period.

New energy vehicles battery case, also known as EV battery box, is one of the most important components in new energy vehicles. The various new energy vehicles usually make use of aluminum alloy for the battery case structures as key components that offer security for their battery payloads, but also structural rigidity for the vehicles.

The main purpose of the battery shell of an electric vehicle is to accommodate and protect the battery. They come in different shapes and sizes, and aluminum and steel are the traditional materials for battery housings. The main obstacle to the large-scale adoption of electric vehicles is the fear that they will not be able to drive far enough on a single charge. Composite materials can provide an improved alternative to significantly improve the performance of electric vehicles.
