Newborn Genetic Screening Test is a laboratory test performed shortly after birth to screen a baby for inherited conditions that may not show symptoms initially but can cause serious harm if not detected early. It uses a small sample such as a dried blood spot or, in some cases, another specimen type to look for genetic changes or disease markers linked to specific disorders. The test is designed to flag infants who may be at risk so they can receive confirmatory diagnostic testing, timely treatment, and appropriate long term follow-up care.
