## Abstracts

The global Next Generation Ablation System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cryoablation is a procedure that uses low temperatures to treat cancer. During cryoablation, a thin rod-shaped needle (cryoprobe) is inserted through the skin and directly into the cancerous tumor. Gas is pumped into the cryoprobe, which freezes the tissue. Then allow the tissue to thaw. Repeat the freezing and thawing process several times. Cryoablation is the next generation of ablation technology.
