Abstracts

According to our (Global Info Research) latest study, the global Natural Gas Refueling Infrastructure market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

With an increase in the number of natural gas vehicles, significant growth in natural gas refueling infrastructure has been witnessed across the globe. Natural gas is primarily used in two forms, namely compressed natural gas (CNG) and liquefied natural gas (LNG). Natural gas when compressed over 200 bars gets converted into CNG and is stored in high-pressure storage tanks. Natural gas when cooled to -161°C gets converted in liquid form and is stored in highly-insulated tanks. Generally, CNG occupies more volume of gas at standard conditions while LNG occupies small volume of gas.

Methane is the major component of natural gas and has chemical and physical properties which makes it suitable for vehicles. Natural gas is an excellent transportation fuel for internal combustion engines. A large number of benefits such as low cost, non-toxic nature, and abundant domestic supply boost the demand for natural gas as a vehicular fuel. High mileage and better efficiency can be achieved using natural gas as a transportation fuel. Natural gas vehicles are a rapidly expanding technology and has the potential to transform the transportation sector as well as have significant impact on the global natural gas market.
