The global Next-Generation Wearable Holter Device market size is expected to reach \$ 1555 million by 2029, rising at a market growth of 3.3% CAGR during the forecast period (2023-2029).

A Holter monitor is a small, wearable device that records your heart activity for typically 24 to 72 hours, and up to 7 to 14 days. The device is small, lightweight, and hangs around your neck while connecting cable to sensors attached to your chest. A Holter monitor captures all your heart activity throughout the day and while your sleep. This allows a physician to determine if there are intermittent abnormalities to your heart rhythm over an extended period of time. The test is safe and painless.
