According to our (Global Info Research) latest study, the global NFC Access Cards market size was valued at US\$ 1897 million in 2024 and is forecast to a readjusted size of USD 3485 million by 2031 with a CAGR of 9.2% during review period.

Near Field Communication (NFC) technology is a standards-based wireless communication technology that allows data to be exchanged between devices that are a few centimeters apart. NFC operates at 13.56 MHz and transfers data at up to 424 Kbits/seconds. Because NFC technology enables smartphones to act as key cards, there is no need to issue separate key cards. This helps to reduce overhead and ease the administrative burden for IT professionals managing access control.

Near field communication, or NFC, technology is very similar to RFID, albeit more modern. While the functionality is similar, NFC is more typically found in mobile access control systems, in which smart tags activated on smartphones can act as both receivers and transmitters of data.
