According to our (Global Info Research) latest study, the global NFC-RFID Magnetic Shielding Sheet market size was valued at US\$ 329 million in 2025 and is forecast to a readjusted size of US\$ 506 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global NFC-RFID Magnetic Shielding Sheet production reached approximately 5,470 K Sq.m, with an average global market price of around 58.5 US\$/Sq.m.

NFC-RFID Magnetic Shielding Sheet is a thin functional magnetic material, usually made from flexible ferrite, sintered ferrite, magnetic powder composite or high-permeability magnetic materials, used behind NFC or RFID antennas to guide magnetic flux, reduce metal interference and improve 13.56 MHz signal reading performance. It is commonly applied in smartphones, smart cards, RFID labels, on-metal tags, access control devices, payment terminals, reader modules and IoT identification devices.

The average single-line production capacity of NFC-RFID Magnetic Shielding Sheet is 210 K Sq.m, the average gross profit margin was 28.6%.

The upstream of the NFC-RFID Magnetic Shielding Sheet industry mainly includes ferrite powder, magnetic powder, polymer binders, adhesives, release films, PET/PI films and precision coating materials. The midstream includes magnetic sheet formulation, ferrite sintering or composite processing, calendaring, coating, lamination, die-cutting and customized antenna-matching design. The downstream mainly serves NFC modules, RFID tags, smart cards, mobile devices, payment terminals, access control systems, logistics labels, industrial identification and IoT hardware manufacturers.

The cost structure is mainly composed of magnetic raw materials 35%?45%, including ferrite powder and magnetic composites; processing and manufacturing 20%?25%, including sintering, coating, lamination, slitting and die-cutting; adhesive films and auxiliary materials 10%?15%; labor and quality inspection 8%?12%; energy and equipment depreciation 5%?8%; and packaging, logistics and other expenses 5%?8%. High-end products for smartphones, payment terminals and on-metal RFID tags usually have higher formulation, precision processing and testing costs.

Demand is mainly driven by the wider use of NFC payment, smart access control, anti-metal RFID tags, smart cards, wearable devices, logistics tracking and IoT identification. As terminals become thinner and more integrated, magnetic sheets are increasingly required to improve antenna efficiency and reduce metal interference in compact spaces. Business opportunities are concentrated in high-permeability thin sheets, customized die-cut parts, on-metal RFID solutions, mobile NFC modules, industrial traceability and smart packaging applications, where customers require stable performance, small size, high reliability and batch customization.
