## Abstracts

According to our (Global Info Research) latest study, the global NFC-SIM Chip market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The NFC-SIM chip is a chip that integrates NFC functions into the SIM card. It allows mobile phones without NFC modules to realize some NFC functions, such as mobile payments, bus cards, etc. The principle of the NFC-SIM chip is to use the SWP (Single Wire Protocol) interface of the SIM card to transmit the NFC signal to the antenna of the mobile phone through a single-wire connection between the SIM card and the mobile phone, thereby realizing NFC communication. The advantage of the NFC-SIM chip is that it can save the space and cost of mobile phones and increase the popularity of NFC. However, the disadvantage is that it requires the support of operators, and the functions and performance of NFC are limited by the capacity and speed of the SIM card.

The Global Info Research report includes an overview of the development of the NFC-SIM Chip industry chain, the market status of Telecommunications Industry (Single Interface Chip, Dual Interface Chip), Financial Sector (Single Interface Chip, Dual Interface Chip), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of NFC-SIM Chip.
