The global Nickel Coated Steel for Cylindrical Lithium Battery Case market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nickel coated steel is a type of metal used in the manufacturing of cylindrical lithium battery cases. The steel is first coated with a thin layer of nickel, which provides several benefits for the battery. Firstly, the nickel coating provides a barrier between the steel and the electrolyte solution inside the battery, preventing corrosion and degradation of the steel over time. This helps to ensure the long-term performance and safety of the battery. Secondly, the nickel coating improves the conductivity of the battery case, allowing for more efficient transfer of electrical current between the battery's electrodes and external circuitry. This results in higher battery efficiency and performance. Finally, the nickel coating provides mechanical strength and durability to the battery case, protecting the battery from physical damage and deformation during use and handling.
