Abstracts

The global Nickel-Molybdenum Alloy market size is expected to reach $ 660 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Nickel-molybdenum alloys are corrosion-resistant, high-performance alloys made with nickel as the base material and molybdenum as the main alloying element, with the addition of elements such as chromium, iron, and cobalt to meet performance requirements. They possess excellent resistance to reducing media corrosion, acidic environments, pitting corrosion, and good high-temperature mechanical properties, and are widely used in chemical, oil and gas, energy, marine engineering, and high-end equipment industries.

Upstream applications mainly include nickel, molybdenum, and other alloying elements, metal smelting raw materials, industrial gases, and refractory materials; downstream applications are mainly in chemical equipment, oil and gas, nuclear power and new energy, marine engineering, aerospace, environmental protection equipment, and components for high-temperature and high-corrosion environments.

The global average price of nickel-molybdenum alloys is approximately US$70,000 per ton, with sales volume of approximately 5,400–6,500 tons and an industry gross profit margin of 18%.

The future global nickel-molybdenum alloy market will develop towards higher corrosion resistance, higher temperature stability, higher purity, and customization. As the demands for materials suitable for extreme operating conditions continue to rise in the petrochemical, fine chemical, marine engineering, nuclear energy, hydrogen energy, and new energy equipment industries, the application of nickel-molybdenum alloys in

strong acid, reducing media, and high-temperature corrosive environments will continue to expand. Simultaneously, manufacturers will further optimize processes such as vacuum melting, precision casting, hot working, and powder metallurgy to improve material consistency and the ability to process complex components. Future market competition will increasingly focus on the development of high-end grades, material performance enhancement, domestic substitution, resource utilization efficiency, and recycling capabilities. Emerging industrial markets in Asia will also become important growth areas.
