Nickel plated spring stainless steel wire refers to a spring material with a layer of nickel plated on the surface of the stainless steel wire. The nickel plating layer can improve the corrosion resistance, oxidation resistance and wear resistance of the stainless steel wire, while enhancing the surface smoothness of the spring and preventing rust. Nickel-plated spring stainless steel wire is usually used in demanding environments such as electronic equipment, automotive industry, medical equipment and other fields. It combines the elasticity of stainless steel and the durability of nickel, giving the spring better durability and long-term stability.
