According to our (Global Info Research) latest study, the global Nicotinamide Riboside Hydrogen Malate (NR-HM) market size was valued at US\$ 22.3 million in 2024 and is forecast to a readjusted size of USD 33.5 million by 2031 with a CAGR of 4.3% during review period.

Nicotinamide Riboside Hydrogen Malate (NR-HM), also known as nicotinamide riboside hydrogen malate, is a saline form of an important bioactive substance ?1. It has multiple physiological effects such as increasing the concentration of NAD+ (nicotinamide adenine dinucleotide) in tissues, inducing insulin sensitivity, enhancing deacetylase function, and improving mitochondrial health ?1. In addition, NR-HM is more consistent in appearance and texture, helping to improve the overall quality of the product and the user experience. The crystalline NR-HM can still maintain good stability at higher temperatures, which makes it able to withstand higher temperature conditions during the preparation process, which helps to optimize the production process and improve the production efficiency ?1. In the United States, niacinamide ribose malate (NR-HM) has received authoritative approval from the U.S. Food and Drug Administration (FDA) as a safe new dietary ingredient (NDI) ?.
