According to our (Global Info Research) latest study, the global Nicotine Bitartrate Dihydrate market size was valued at US\$ 19.04 million in 2025 and is forecast to a readjusted size of US\$ 23.70 million by 2032 with a CAGR of 3.1% during review period.

Nicotine Bitartrate Dihydrate (CAS No.: 6019-06-3) is a white to pale yellow crystalline powder; it is a salt formed by the chemical combination of nicotine and tartaric acid. It is frequently utilized in e-liquids to enhance the stability of nicotine release and also serves as a pharmaceutical intermediate.

The upstream segment of the Nicotine Bitartrate Dihydrate industry chain primarily comprises natural nicotine?extracted and purified from tobacco leaves or tobacco waste?along with a small quantity of synthetic nicotine, as well as the L-(+)-tartaric acid, solvents, and purification aids required for salt formation. The core processes in the midstream segment involve nicotine extraction and refining, salt formation, crystallization, hydration, drying, and quality control. The downstream segment focuses on smoking cessation substitutes and novel oral nicotine products.

The average selling price of Nicotine Bitartrate Dihydrate stands at approximately USD 185 per kilogram; sales volume is projected to reach around 100 tons in 2025, with a gross profit margin ranging between 20% and 25%.

Nicotine ditartrate dihydrate, a high-purity salt form of nicotine, serves as a critical functional ingredient in modern nicotine delivery systems and Nicotine Replacement Therapy (NRT) products. The development of this industry is currently being profoundly

shaped by the dual influences of global health policies and the iterative evolution of harm-reduction technologies. The FDA's continued endorsement of NRT products?such as gums, lozenges, patches, inhalers, and nasal sprays?coupled with its landmark authorization in 2025 of 20 ZYN nicotine pouch products, has underpinned the sustained growth and sophistication of downstream demand for this specific ingredient. Possessing a dual advantage in raw materials (tobacco leaf/natural nicotine) and vertically integrated capabilities for extraction and salt formation, India currently dominates the global supply landscape for this product, which remains highly concentrated within the country.
