According to our (Global Info Research) latest study, the global Nicotine MouthSpray market size was valued at US\$ 130 million in 2025 and is forecast to a readjusted size of US\$ 231 million by 2032 with a CAGR of 8.7% during review period.

In 2025, global Nicotine MouthSpray production reached approximately 500,000 units, with an average global market price of around US\$119-\$400 per unit. In 2025, the global 's total production capacity of Nicotine MouthSpray reached 630,000 units. The industry average gross profit margin of this product has reached 40-60%. Nicotine MouthSpray is a nicotine replacement therapy (NRT) product used to assist in smoking cessation. It uses a portable spray device to spray a measured amount of nicotine solution into the cheek or under the tongue. Nicotine is rapidly absorbed into the bloodstream through the oral mucosa, thus relieving cravings and withdrawal symptoms during the smoking cessation process. It works faster than nicotine gum or patches and is suitable for use as needed when cravings suddenly arise. As an over-the-counter drug, it aims to help smokers gradually wean themselves off tobacco by providing a safe and controlled dose of nicotine.

The Nicotine MouthSpray industry chain involves multiple stages. The upstream mainly includes the production of nicotine raw materials, pharmaceutical excipients, and spray devices. Nicotine, as a highly toxic chemical and addictive substance, is strictly regulated globally in its production, distribution, and use, and companies typically need to obtain the corresponding licenses. The midstream involves product research and development and production, primarily led by pharmaceutical companies. Downstream are sales channels and end consumers. Products are sold to smokers seeking to quit smoking through online e-commerce platforms, offline pharmacies, convenience stores,

and other retail networks. The entire chain is highly constrained by the classification and regulatory policies of nicotine products in various countries.

The market prospects for Nicotine MouthSprays, belonging to the smoking cessation aids category, are robust. The core driving factors are increased global efforts in tobacco control, heightened health awareness, and stronger desire among smokers to quit. Looking ahead, the industry faces key trends including: a stricter and more complex regulatory environment, with differences and uncertainties in the definition and control policies of nicotine products across countries; diversified market competition, requiring products to compete with other nicotine alternatives such as e-cigarettes and modern oral nicotine pouches; and clear development opportunities, with the expansion of online sales channels and product innovation targeting specific population groups becoming important growth drivers.
