The global Niobium Foil and Strip market size is expected to reach \$ 72.29 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

In 2025, global Niobium Foil and Strip production reached approximately 200 tons, with an average global market price of around 223.5 US\$/kg.

Niobium foil and strip are thin flat processed products made from high-purity niobium ingots through rolling, annealing and surface finishing, featuring outstanding high temperature resistance, excellent corrosion resistance, low temperature toughness and good electrical conductivity. With stable chemical inertness and superior mechanical performance, they can adapt to extreme working conditions, and are widely used as core functional materials in aerospace, superconductor equipment, electronic components, chemical anti-corrosion facilities and new energy industries.

Market demand for niobium foil and strip is steadily increased by the fast development of superconducting technology, aerospace manufacturing and new energy industry, together with rising demand for corrosion-resistant and high-temperature resistant metal materials. Business opportunities lie in improving precision rolling technology to produce ultra-thin and high-uniformity products, expanding high-purity customized specifications, deepening layout in superconducting and electronic semiconductor fields, and expanding global customer resources to occupy more shares in high-end rare metal processing market.
