According to our (Global Info Research) latest study, the global NIR-II Imaging System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The NIR-II imaging system is an imaging system that applies near-infrared two zone fluorescence imaging technology. Near infrared two zone fluorescence imaging technology is a deep and high-resolution optical live imaging technique. Compared with the visible light (360-760 nm) and near-infrared region 1 (760-900 nm) windows, the tissue light absorption in the near-infrared region 2 (900-1880 nm, NIR-II) window is significantly improved, which significantly suppresses the scattering background in two-dimensional array imaging and improves the imaging effect.
