Abstracts

Nitinol-based medical devices are made of nitinol, an alloy of nickel and titanium. The use of nitinol-based stents and guidewires has improved procedural outcome.

Scope of the Report:

This report focuses on the Nitinol-based Medical Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Nitinol SMAs have a high level of super-elasticity and are used in hip replacements. They are also used in medical implants like vascular stents, transcatheter heart valve, vascular closure implants, neurovascular closure implants, neurovascular clot pullers, devices and flow diverters, vena cava filters, orthopedic anchors, and atrial fibrillation devices.

Nitinol-based stents are gaining popularity because they are used in carotid artery surgery, arteries in kidney and limbs, aorta in the abdomen or chest, and close off aortic tears.

The majority of the patient pool highly prefers hospitals over other healthcare units because they perform a large number of stents placement procedures such as the nitinol-based medical device placement. These stents are highly adopted by physicians because they reduce the patient recovery time and provide improved outcome than other invasive procedures.

The worldwide market for Nitinol-based Medical Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
