According to our (Global Info Research) latest study, the global Nitrided Ferromanganese market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Nitrided Ferromanganese is an essential alloying agent for the production of special alloy steels, stainless steels and heat-resistant steels, and is usually obtained by nitriding medium and low carbon ferromanganese. Ferromanganese nitride is mainly used as an additive of nitrogen in steelmaking production, which can improve the mechanical properties of steel such as strength, grain refinement and austenite stabilization. Ferromanganese nitride has high content of main elements, low content of phosphorus and other hazardous impurities, high utilization rate of nitrogen after joining the melt, and low addition amount.

This report is a detailed and comprehensive analysis for global Nitrided Ferromanganese market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets.
