Nitrile coated fabric is a type of fabric that has been coated with a layer of nitrile rubber. Nitrile rubber is a synthetic rubber compound that is known for its excellent resistance to oil, fuel, chemicals, and abrasion.

The coating process involves applying a layer of nitrile rubber onto the surface of the fabric, which provides a protective barrier and enhances the fabric's durability and performance. The nitrile coating also improves the fabric's grip, making it suitable for applications that require a firm and secure grip, such as gloves or industrial workwear.

Nitrile coated fabric is commonly used in various industries, including automotive, manufacturing, construction, and oil and gas. It is often used for making gloves, aprons, sleeves, and other protective clothing, as well as for creating seals, gaskets, and other industrial applications that require resistance to chemicals and abrasion.
