According to our (Global Info Research) latest study, the global Nitrile Silicone Rubber (MNQ) market size was valued at US\$ 791 million in 2024 and is forecast to a readjusted size of USD 984 million by 2031 with a CAGR of 3.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Nitrile silicone rubber (MNQ) is a special silicone rubber. Nitrile silicone rubber is mainly an elastomer containing methyl-?-nitrile ethyl siloxane chain segments or methyl-?-nitrile propyl siloxane chain segments in the molecular chain. It is made by a specific chemical reaction of raw materials such as cyanoalkyl methyl dichlorosilane and dimethyl dichlorosilane. Nitrile silicone rubber has excellent oil resistance and solvent resistance, which enables it to maintain stable performance in an oily environment. Secondly, it can maintain good elasticity at lower temperatures, and its low temperature resistance can usually reach -38?~-60?, or even lower. At the same time, it can also maintain stable performance in high temperature environments, and its high temperature resistance can usually reach 250?~265?. In addition, nitrile silicone rubber has high stability to thermal oxidation and ozone, and can be used for a long time under harsh environmental conditions.
