The global Nitrofurazone ELISA Kit market size is expected to reach \$ 187 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

The Nitrofurazone ELISA Kit is a detection tool based on enzyme-linked immunosorbent assay (ELISA) technology, used for specific detection of Furacillin content in samples. Nitrofurazone is an artificially synthesized nitrofurantoin antibacterial drug, which has the characteristics of wide bactericidal spectrum and stable properties. This kit utilizes the specific binding reaction between antigen and antibody, and generates signal changes such as color or fluorescence through enzymatic catalysis of substrates, thereby quantitatively or qualitatively analyzing Nitrofurazone in samples. It has the advantages of high sensitivity, strong specificity, easy operation, and fast detection speed, and can obtain accurate detection results in a short period of time.

This report studies the global Nitrofurazone ELISA Kit production, demand, key manufacturers, and key regions.
