## Abstracts

According to our (Global Info Research) latest study, the global Nitrogen Atomized Metal Powder market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Nitrogen atomized metal powder is a type of metal powder produced by a process called nitrogen atomization. In this process, molten metal is forced through a nozzle at high pressure into a chamber filled with nitrogen gas. The rapid expansion of the gas breaks up the molten metal into fine droplets, which then solidify into small, spherical particles of metal powder.
