## Abstracts

The global Nitrogen Atomized Metal Powder market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Nitrogen atomized metal powder is a type of metal powder produced by a process called nitrogen atomization. In this process, molten metal is forced through a nozzle at high pressure into a chamber filled with nitrogen gas. The rapid expansion of the gas breaks up the molten metal into fine droplets, which then solidify into small, spherical particles of metal powder.

This report studies the global Nitrogen Atomized Metal Powder production, demand, key manufacturers, and key regions.
