The global Nitrogen Filled High Temperature Box market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nitrogen-filled high-temperature box is a kind of equipment used for high-temperature treatment of materials, which can carry out nitriding treatment on materials at high temperature. The interior of the equipment is filled with nitrogen to create a nitriding environment, so that a layer of nitride film is formed on the surface of the material, which improves the hardness and wear resistance of the material. Nitrogen-filled high-temperature ovens are widely used in the surface treatment and modification of metals, ceramics, plastics and other materials, and can also be used in the production of electronic components and semiconductor materials.
