Nitrogen gas spring is a new type of spring component by using high pressure Nitrogen as its medium. It features small size, great elastic force, long stroke, stable performance, precision manufacturing, long service life (1,000,000 times), gently curve diagram for elastic force, no need retightening etc.

Using Nitrogen gas spring component can simplify molds design, manufacturing, installation as well as its adjustment. Using that type of spring can extend mold's service life and ensure stable quality. Nitrogen gas spring not only can be used as separate component to be installed into molds, but also to be designed to Nitrogen gas spring system, then act as part of mold to accomplish stable function of elastic force and retardation action, it is new generation type of ideal elastic component with flexible functions.
