Abstracts

Nitrogen purging is a practice that is followed to replace an undesirable or hazardous atmospheric condition with a dry and desirable environment. The two prominent ways of nitrogen purging are dilution and displacement. Nitrogen Purge Systems is commonly used when the vessel being purged only has one opening or in batch operations like purging ethylene oxide sterilizers.

Scope of the Report:

This report focuses on the Nitrogen Purge Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Dilution nitrogen purge systems are extensively used in areas that have a high velocity of gas. The adoption of these systems is increasing in various industries to clean and maintain storage tanks or vessels of huge volumes. The installation of these systems will continue to increase in the forthcoming years because storage tanks are highly used in the oil and gas sector, driving the growth of this segment in the nitrogen regulator market.

The worldwide market for Nitrogen Purge Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
