According to our (Global Info Research) latest study, the global Nitrogenous Ferromanganese market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Ferro Manganese Nitride is an essential alloying agent for the production of special alloy steels, stainless steels and heat-resistant steels, and is usually obtained by nitriding medium and low carbon ferromanganese. Ferromanganese nitride is mainly used as an additive of nitrogen in steelmaking production, which can improve the mechanical properties of steel such as strength, grain refinement and austenite stabilization. Ferromanganese nitride has high content of main elements, low content of phosphorus and other hazardous impurities, high utilization rate of nitrogen after joining the melt, and low addition amount.
