According to our latest research, the global Nitrosamine Testing Services market size will reach USD 170 million in 2031, growing at a CAGR of 6.1% over the analysis period.

Nitrosamine Testing Services refers to the services provided by professional institutions using various advanced analytical testing technologies and methods to accurately detect and quantitatively analyze nitrosamine compounds in different samples and issue scientific and accurate test reports. Nitrosamines are a class of compounds formed by the connection of nitroso groups and amino groups. They are widely present in various media such as the environment, food, and medicines. Many nitrosamines have strong carcinogenic, teratogenic, and mutagenic effects, posing a serious threat to human health. Testing services cover the entire process from sample collection and pretreatment to testing and analysis using instruments such as liquid chromatography-mass spectrometry (LC-MS) and gas chromatography-mass spectrometry (GC-MS), which can provide important basis for customers to evaluate the pollution status of nitrosamines and ensure product quality and safety. It may also be called nitrosamine analysis services, nitrosamine content testing services, etc.
