According to our (Global Info Research) latest study, the global NK Cell Isolation Kit market size was valued at US\$ 922 million in 2024 and is forecast to a readjusted size of USD 1325 million by 2031 with a CAGR of 5.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The NK Cell Isolation Kit is designed to magnetically isolate NK cells from a complex immune cell population. The kit is optimized for the isolation of CD56+CD3- cells from normal human peripheral blood mononuclear cells (PBMCs). The cells are incubated with a cocktail of antibodies and then bound to magnetic beads. They are then placed on a magnet for quick and easy separation. When placed on the magnet, non-NK cells will be fixed to the side of the tube, while NK cells will remain in suspension and can be easily removed for downstream applications.
