According to our (Global Info Research) latest study, the global NMC 811 Battery market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

NMC 811 battery is a new type of battery, whose electrode material consists of 80% nickel, 10% cobalt, and 10% manganese. This type of battery is based on the previous ternary lithium battery, and by adjusting the electrode material ratio to 8:1:1, it can improve the energy density, range, and cycle life of the battery, as well as enhance its safety. The cycle life and safety of the NMC 811 battery have been significantly improved, thanks to the optimization of its new electrode material. In addition, due to its increased energy density, the range of the 811 battery has also been significantly improved, which plays an important role in the popularization of electric vehicles. At present, major battery companies are actively researching and developing 811 batteries in order to gain a larger market share. In addition to CATL, South Korean battery manufacturers SK Innovation and LG Chem are also developing NCM 811 batteries, while cylindrical battery companies such as BAK are also conducting corresponding research and development work.
