Abstracts

NMR deuterated solvent is a special solvent used in nuclear magnetic resonance (NMR) experiments. Its main feature is that the hydrogen atoms in the molecule are replaced by deuterium atoms, thereby reducing the interference of the hydrogen signal in the solvent on the sample signal and improving the resolution and accuracy of NMR experiments. This solvent is commonly used for NMR analysis of hydrogen-containing compounds, such as organic compounds, to obtain information on their structure and physical properties.

According to our (Global Info Research) latest study, the global NMR Deuterated Solvent market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

With the continuous advancement of nuclear magnetic resonance technology and the expansion of application fields, the demand for NMR deuterated solvents is likely to continue to grow. Especially in the fields of drug research and development, materials science, biochemistry and other fields, NMR technology plays an increasingly important role, so high-quality NMR deuterated solvents will receive more attention.
